OUR AREAS OF EXPERTISE UNITED AT THE SERVICE OF OUTDOOR LAYOUTS

ATELIER SO GREEN studies, sizes and produces products in line with your specific needs.

An activity ocused on three brands : Image'In / Steelab / CJCJ.

Different offers that share a common philosophy and resources.

Ever since it was first set up back in 1984, the family-run limited liability company «Création Jean Claude Joly sarl» has been committed to studying and manufacturing urban fixtures to meet specific needs. The company has been developing technical lighting integration solutions since 1991 under the original brand **CJCJ**, thanks to its multi-skilled technical know-how encompassing fibre-cement processing, sheet metal work and the concrete and mirror trades among others.

In 2007, the company designed the **IMAGE' IN** range for gardens, patios, balconies, ...

Sleek, clean-lined fibre-cement planters for indoor or outdoor use. This has now become our main line of business today, expanding over the years particularly to include outdoor furniture to go with our plant tubs : benches, storage boxes, side tables, Salon lounge range ...

Last but not least, to cater to needs where fibre cement is no longer the best solution, we have come up with an additional sheet metal range : **STEELAB**. Together with our local partner, we jointly oversee the manufacture of sheet metal planters and furniture for urban fixtures, large-scale projects calling for high production capacities, or to address weight or volume restrictions ...

DESIGNER & MANUFACTURER COMMITTED TO ENVIRONMENTAL AND SOCIETAL QUALITY

MADE IN FRANCE

Our workshop is a craft business guaranteeing 100% French manufacture.

ATELIER SO GREEN is located in Touraine, in the heart of an industrial park for small businesses.

Between rivers, vineyards and forests, nature and human activity live together with harmony.

We attach great importance to our skilled, local workforce and the use of top-of-the-range tools, guarantees of our employees' safety and the quality of our products.

Our materials and accessories all come from Europe, mainly from France.

SUSTAINABLE COMMITMENT

Committed as we are to rational consumption and in order to ensure lasting quality, we have chosen to use such long-lasting materials as fibre cement, bicomponent PU paints and finishing varnishes.

We focus our efforts on providing aesthetic, long-lasting solutions that harmonise with their surroundings. Commitment is one of the company's founding values, and has been expressed from its very beginnings through attentiveness to our customers' needs and expectations, as well as through our product design and manufacture processes. It is commitment that inspires all the company's initiatives.

ENVIRONMENT

Commitment to optimised management of materials. Fibre cement is a mineral material used in green construction due to its inherent qualities. Our supplier is eco-responsible in its own right, with ISO14001 certification.

Our bicomponent polyurethane paints and our glues are manufactured in France. We use paints similar to those used in the automotive sector : LOW VOC ensuring compliance with the law on limitation of emissions of volatile organic compounds.

We produce no paint waste: all residual paint is used to weatherproof the insides of our planters.

With a view to reducing offcuts (<10%) we use software designed to optimise cutting. Offcuts are reused to manufacture sample cards and small presentation planters.

Workshop waste is sorted and recycled at a specialised treatment facility (rubble, paper and cardboard, and wood).

THE FIBRE-CEMENT

Planters & Furniture Image'n are manufactured in fibre cement HDNT (High density new technology) in thickness of 10 or 15 mm depending on the product sizing. The panel is composed of a mixture of cement, natural fibers, mineral fillers, and additives. The plates thus obtained are doubly compressed and then autoclaved.

This material, standed out through high stability, is worked by cutting and gluing. Then it is laquered and varnished for an optimal coat.

Its composition

WATER : Essential component for the manufacture of fiber cement, it is used to transport raw materials during the process and it is also present in the finished product. Its use is limited to the minimum necessary. The factories operate in closed circuit and reuse their industrial wastewater.

CEMENT : Binder hydraulic mineral, based limestone and clay, which allows to agglomerate the sand, fibers, etc.. Cement from cement plants located near the places of manufacture.

CALCIUM CARBONATE : It is used as a filler in the product.

AMORPHOUS SILICA : Dust residual of the fumes in the silicon industry. Amorphous silica is a byproduct of the manufacture of silicon, ferrosilicon and some alloys. Since 1997, fiber cement values this product by using it in its manufacture.

POLYVINILALCOOL : Synthesis fiber of organic origin whose main components are coal and oil. This fiber traditionally used in the manufacture of textiles, gives the product its mechanical resistance. Suppliers are mostly in Japan and are engaged in type ISO 14001 approaches.

CELLULOSE : Organic fiber derived from wood and paper. Once refined cellulose fibers are used to trap and to agglomerate the cement to form a plate. Suppliers are involved in processes of responsible forest management : FSC / PEFC / ISO 14001.

Its Qualities

ENVIRONMENTAL RESPECT

Its composition makes it perfectly respectful throughout the manufacturing cycle / implementation / deconstruction.

FROST PROOF

Insensitive to cold or to the most intense heat.

MOISTURE RESISTANT

It is totally insensible to moisture.

LONG-LASTING

Its nature and quality ensure a long-term use.

THERMAL VALUE

Its conductivity is particularly low.

NON-COMBUSTIBLE

By nature it is incombustible and is classed : MO / A2-s1dO - EN 13501-1

It is in compliance with the NF EN 12467 Standard (class 4 - category A).

MADE-TO-MEASURE MANUFACTURE

Because every project is unique, ATELIER SO GREEN is at your disposal to create it tailor-made to your requirements.

With long experience to our credit, along with finely honed technical skills, unrivalled proficiency in the manufacture of our «Made in France» products at our Touraine workshops, we manufacture our products to order only and therefore to your specifications.

It's your choice !

Formats proposed on our catalog is an illustration of our manufacturing capacity without being a limit.

So the **Image`In** range will meet the needs of all your projects, however specialised, under the best possible quality and service conditions. The Image`In range of planters and furniture provides an unlimited choice of shapes, sizes, colours, finishes, etc.

COLOURS & FINISHES

COLOURS

We provide all shades on the RAL standard colour chart.
Other shades possible on request, by colour matching your sample.

**Warning : The depiction of the colours on the screen or on paper is not always true to life.
It is better to consult a paper standardised colour chart.**

FINISHES

Choose your varnish in finish : Matt, Satin, Gloss or Micronised (also called Sanded).

Option - Anti-Graffiti Varnish IOP-VAG

Accredited anti-graffiti varnish ; exists in gloss finish only.
The accredited «anti-graffiti» varnish is resistant enough to allow the use of certain solvents to remove inks.

Option - Zinc Patina IOP-PZC

Hand-finished shine imitating the appearance of zinc. With matt finish.
These patina being the result of the applicator's labour, they will vary endlessly and it will never be possible to reproduce them exactly. The photos displayed on our sites and in our catalogues are just a rough guide.

Option - Rust look IOP-RUST

Rust look finish (type CORTEN brand); paint containing iron oxide particles; with matt finish.
These finishes being the result of the applicator's labour, they will vary endlessly and it will never be possible to reproduce them exactly. The photos displayed on our sites and in our catalogues are just a rough guide.

Possible alternative: «Marron Métallisé» IOP-MM or without additional cost : «Marron Oxyde Urbain» micronised varnish.

OPTIONS

PERFOS

Fittings for putting in automatic watering and / or lighting systems.
Simply on request we can adapt the containers to suit your requirements : perforations, cut-outs, waterproof risers, etc.

Horticultural System IOP - SH

Drainage system offering a 5L/m² reservoir.
40mm thick - 25kg/m³ density

Water Level Indicator IOP - INE

For pots used indoors which have a watertight base. The float indicates the water level at the bottom of the container. It allows the monitoring of watering.

Installation on Casters for Handling IOP - RL

Concealed under the container, the casters are not visible.
They allow the plant container to be moved from time to time.

Installation on Adjustable Plot IOP - PLOT

For a well-balanced installation, with a uniformly distributed load. Allows water to flow underneath the container and also allows adjustments in the alignment of linear arrangements of containers. Reserved for >40cm wide containers.

Installation on Adjustable Feet IOP - PR

For installation on sloping ground or to replace IOP-PLOT for <40 cm wide containers.

Installation on PSX panel IOP - PSX

Polystyrene weight distribution buffer.
Avoids perforation if installing directly on waterproofing.

Handling by Forklift IOP - MTP

Removable trap door concealing an access underneath the container for handling by forklift. Ideal for moving large containers from time to time.

Wall insulation (PSX) IOP - ISOL

Fibre-cement already has a low thermal exchange coefficient.
In areas with extremes of climate, wall insulation can be added.

Hole and crosspiece for secure fixing IOP - TES

Hole and crosspiece for lateral fixing IOP - TEL

For the fixing of containers to each other or to a wall.

Warning : even with secure fixing, our products are decorative furniture.
They can't be considered as constitutive elements of buildings.

Raised base IOP - FR

Allows a reduction in the volume and weight of the soil when plants do not require the whole capacity.

Removable raised base IOP-FRA

Allows a reduction in the usable height. It offers a double base with the possibility of ballasting. Ideal when using artificial plants.

WATER MANAGEMENT

Draining base

Perforated base to drain off excess water underneath the container.
Allows good drainage of rainwater and after watering, and also a good ventilation of the root ball. Ideal balance for pots used outdoors.

Water reservoir with Horticultural system

Allows the creation of a reservoir in the drainage section free from the risk of frost.
Overflow drainage underneath the container or on one side via a weep hole.

Drainage via Weep hole

Watertight base with overflow drainage via a weep hole on one side of the container, with or without water reservoir.

Watertight base

To avoid any discharge of dirty water when used indoors.
Can be completed by a Water Level Indicator to control watering.

IMPLEMENTATION

Place a geotextile pad at the bottom of the interior. It is possible to fit the latter up the sides to allow moisture to migrate effectively. To ensure efficient and constant drainage, **build a drainage system into the bottom of the container** (5 to 15 cm of clay pellets, for example). **Place another layer of geotextile on top of the drainage system** to separate it from the planting substrate and the roots.

The type of substrate depends on your plants. It might be a simple compost or a mixture of compost + garden soil. It can be lightened if necessary. **Ask your landscape gardener or your nursery for advice.**

It is possible to add a surface mulch. A few cm of clay pellets or bark will reduce evaporation and restrict the growth of weeds.

Download the complet installation instruction on www.ateliersogreen.com/documentation-imagein/?lang=en

Horticultural System

No more need for a clay pellet drainage system. The horticultural polystyrene sheet ensures an efficient and constant drainage, combined with a 5L/m² reservoir (or more depending of the selected option). Ideal to ensure a water retention without harming the good ventilation of the root ball.

Edition
